

JIRA LAB SUBMISSION

ScrumBoard,Sprints&Burndown Analysis

Name	Abhay S
SRN	PES1UG24CS013
Project	Patient Health Record Consent Management System
Board	PHR board
Sprints	Sprint 1 & Sprint 2

Submission Contents

1. Backlog / Stories / Priorities / Story Points
2. Sprint 1 Board
3. Sprint 2 Board
4. Sprint 1 Burndown Chart
5. Sprint 2 Burndown Chart
6. Reflection Questions

Backlog / Stories / Priorities / Story Points

Expected story points: 1.1=5, 1.2=3, 2.1=5, 2.2=8, 3.1=3, 3.2=5.

Sprints

Sprint 1 — Burndown Chart

Sprint 2 — Burndown Chart

1. Did your estimations reflect the actual effort?

Yes, the estimations were reasonably accurate. The higher-point stories, such as 2.2 (Provider Identity Verification Gateway, PHR-7) with 8 points, required significantly more effort and architectural planning due to external provider registry handshakes, mTLS verification, and failure recovery. In contrast, smaller stories like 1.2 (Instant Revocation, PHR-5) with 3 points were straightforward state transitions with immediate cache eviction. Overall, the Fibonacci story points gave a good representation of the relative complexity, uncertainty, and workload.

2. Was your backlog well-prioritized?

Yes, the backlog was prioritized strictly based on security criticality and functional dependencies. High-priority stories forming the foundational authorization engine—granting consent, immediate revocation, scoped access requests, and doctor identity validation (Stories 1.1 to 2.2)—were placed in Sprint 1. Lower-priority and supplementary features like real-time notifications (3.1) and regulatory audit logging (3.2) were scheduled for Sprint 2. This ensured core medical privacy was operational before notification pipelines were attached.

3. How did your simulated sprint align with your plan?

The simulated sprints aligned well with the plan. Sprint 1 committed the four highest-priority security stories totaling 21 story points, while Sprint 2 contained the remaining two stories with 8 points. All planned stories progressed smoothly from To Do -> In Progress -> Done within their respective sprint boundaries, so both sprints closed at 100% commitment with zero work carried over, confirming complete alignment with the sprint plan.

4. What insights did the burndown chart give about your team's capacity?

The burndown charts showed that the team was able to complete the planned work during both sprints. Sprint 1 started with 21 story points and Sprint 2 with 8 points, and both reached zero remaining points. The burndown trajectory indicated that higher-point stories (8 points) occupied the longest duration, suggesting that for future sprints, 8-point stories should be broken down into smaller 3-point and 5-point stories to achieve a smoother, more continuous burn rate.
